

Customers Property

Bowers Electricals Ltd. carries out overhaul and remanufacture of customers' property, from the smallest items of plant to large Power Transformer. Our specialist workshops have been developed for overhaul of all products, including Distribution & Power Transformers, High Voltage & Low Voltage Switchgear, Rotating Machines and associated Distribution, Control & Power equipment.

Our site facilities include substantial workshops within our 3 acre site, offering rewind facilities, assembly areas, machine shops, several specialist test bays & drying ovens. All our workshops have large crane capacities and our large Transformer overhauling bay allows overhaul of Power Transformers up to 30MVA with craneage capacity up to 30 tonnes, specialist de-tanking bay, integral oil storage tanks for new/reclaimed and redundant oil, large drying oven and a generator supplied Transformer Test bay for routine, specialist & witness testing.

Our typical Power Transformer overhaul offer includes for: disconnection from site craneage and removal by low loader vehicle to our Heanor works, inspection and report, de-tanking of core and windings, full overhaul of windings, Transformer tank, conservator, tap changer & control equipment with the option of additional/ replacement fittings and replacement radiators. On completion of overhaul we offer return and off-loading, installation and commissioning by our site team.

We offer similar overhaul facilities for all the products in our range. Contact our sales team for consultation and quotation and see how we can help you re-engineer and extend the productive life of all your power engineering equipment.
