

## Power Transformer Manufacture

**Bowers Electricals Ltd** offers manufacture of Power Transformers up to 20MVA at 33kV in our UK facility. We have at your disposal our in house design and manufacturing facilities allowing us to offer you Transformers on relatively short lead times and competitive prices to your exact specifications

Transformers are available generally manufactured ONAN / ONAF / OFAF complete with standard and special fitting including

On load tap changers, Tap changer control Panels, Separate and integral Cooling bank Systems, Forced Fan cooling, Oil circulation pump systems, Temperature Monitoring Systems, HV & LV cable boxes or Outdoor bushings, Conservator & Bucholz etc

All our Power Transformers are subject to stringent testing at our Heanor works which can be witnessed by clients at the end of the manufacturing process. Special Tests such as Temperature Rise, Impulse, Noise levels, etc can also be offered as required

On completion of manufacture and despatch our site teams will where necessary provide site erection/ assembly and commissioning of our Power Transformers ensuring a turnkey solution. Due to our in house design and flexibility we are able to provide bespoke Transformers to client's specific requirements.

It is our aim to provide a solution to your problem or requirement and more importantly, to your satisfaction. Our experienced team of engineers are able to engineer solutions that you can be proud of.

**A Bowers Solution** is an **Engineered Solution** and one that you can rely on to give you peace of mind and long trouble free service

Our range of Power Transformer clients are from all industrial sectors including:

- Petrochem Industry
- Chemical plants
- Mining Industry
- Power Stations
- Data Centres
- Gas Generation and CHP plants
- Offshore projects
- Wind farms
- Traction
